

Zoom Whitening

Philips Zoom Whitening is an In- House whitening treatment. It is very popular and achieves excellent results.

How it works

Zoom Whitening is a very safe way to whiten your teeth. Your gums and other soft tissues are carefully protected with a special covering before your dental professional applies our unique hydrogen peroxide whitening gel. The intense light of the Philips Zoom WhiteSpeed Whitening LED Accelerator shining on the whitening gel makes the process work even faster, improving whitening results by as much as 40%.

What to expect

At your appointment your dental professional will check some details with you and explain the procedure to you. Below are some of the key steps for you to expect.

- Impressions will be taken for your home whitening trays to be made
- Superficial staining on the teeth will be removed
- The barriers to protect your gums and soft tissues will be placed
- The zoom bleaching gel will be prepared and placed
- The Zoom light will then be placed and will last for 15minutes
- After the 15 minutes, your dental professional will remove the gel and place a hydration solution to the teeth
- The whitening gel will then be placed again for a further 15 minute cycle
- After 3 15 minute cycles the whitening is complete
- All after care will be explained by your dental professional at this stage
-

With Philips Zoom a whiter smile is also a healthier smile. Our products for in-office whitening and our Zoom at-home formulas are the only whitening treatments to utilize ACP (amorphous calcium phosphate), which is clinically proven to reduce sensitivity, protect enamel and improve the luster and smoothness of your teeth

- One 1 ½ hour appointment
- Home whitening trays made
- Home whitening gel also provided
- Carefully monitored by your Dental Professional
